Introduction

- Developed database application utilizating significant dataset consisting of 19,000 job postings to equip recruiters with actionable insights for optimal job posting.

- Performed In-depth examination of job titles and company details, analyzing employment conditions, eligibility criteria, and application methods.

- The application provides a strategic understanding of the current demands in various professions and industries, enabling recruiters to gain a crucial insight into market trends.

- Our database application empowers recruiters with vital information and analytics, facilitating strategic talent acquisition

Scope

- The objective of this project is to create a user-friendly application for posting job

- The application aims to ease the process of data entry, categorize job posts, and offer advanced search and recommendation features for job seekers

- It helped in streamlining the job posting process on the portal.

- By bridging the gap between employers and job seekers, this solution ultimately tries to lower unemployment rates and promote economic growth
